Dear Hiring Manager,

I am writing to express my deep interest in the Full Stack Developer position at JamLoop. I am a passionate Software Engineer with proficiency in React and Django. I am confident that my blend of skills, experience, and positive approach make me an ideal fit for your team. I am eager to bring my technical skills, problem-solving strategies, and innovative solutions to JamLoop to contribute towards the growth and success of your demand side platform (DSP).

Throughout my five-year journey as a Software Engineer, I have gained valuable experience in using both front-end and back-end technologies. I served as an Executive Technical Lead at OmniStudy, where I led a group of developers in creating a complex web application using technologies such as Firebase, React, Python, and TypeScript. Also, as the Chief Technology Officer at Seat Cover Solutions, I applied my React, Node.js, and Typescript skills to build a tailored e-commerce platform and a competitive database of over 6,500 automotive vehicles. My academic background in Computer Science has reinforced my practical experience, enhancing my understanding of key technologies, software solutions, and development practices.

The job description suggests that the role requires involvement in building and maintaining the JamLoop demand side platform (DSP). During my tenure at Sofos Robotics, I rebuilt the company portfolio from scratch using HTML, CSS, JavaScript, and PHP, increasing lead generation and improving efficiency. I have also been engaged in the creation of an administrative portal using JavaScript, which reduced time spent on quoting and invoicing by 90%. Leveraging this multifaceted experience, I am confident in my ability to contribute towards the campaign management portal and features at JamLoop.

I have robust experience working in Agile development environments and bring a solid understanding of SQL databases, RESTFUL APIs, containerization, and a strong hand in JavaScript. Although I haven't yet had the opportunity to delve into RTB/programmatic advertising, I am a quick learner and would look forward to rapidly familiarizing myself with these technologies and any other tools vital to your workflow.

I am keen to join a dynamic organization like JamLoop and contribute my technical skills to deliver a high-quality CTV offering that maximizes revenue and enhances user satisfaction. Thank you for considering my application. I am looking forward to discussing this exciting opportunity further.

Sincerely,
Jamison Grudem
